Others	Git, Postman
Foreign Languages	English B1
Certificate	Agile development & Scrum framework

WORK EXPERIENCE

ONLINE MOVIE TICKET BOOKING WEBSITE   02/2023 - 04/2023

Description: The project to build a website to sell movie tickets is a project to create a website so users can buy movie tickets online. The project used technologies and programming languages such as HTML,CSS, JavaScript, NodeJS, ExpressJS, MySQL, Nodemailer. The system is designed with a simple, easy-touse interface.

Technologies: HTML, CSS, NodeJS, ExpressJS, Mysql, Bootstrap, API send SMS of Twilio, Nodemailer

Responsibilities:

- This project is the final product of the web application development course with NodeJS.

- In this project, I perform both the front-end and the back-end, dividing the work among other members. After completing this project, I know how to build a website with NodeJS, MVC model. The front-end part will be built based on the view engine, specifically the handlebars engine.

TENANT MANAGEMENT SYSTEM   04/2023 - 05/2023

Project: (3 members, 2 back-end, 1 front-end)

Description: This project is a tenant information management system to make tenant management easier, faster and more effective.

Technologies: HTML, CSS, JavaScript, NodeJS, ExpressJS, Nodemailer, Api sms Twilio

Responsibilities:

- This project is the final product of the service-oriented architecture (SOA) course.

- In this project, I implemented both back-end and front-end. On the back-end I write APIs that can be called from the client side. After completing the project I learned about writing APIs, using email sending services, MVC model and working with github.
